

VLS from Ultra Librarian: Request. Download. Design. Parts built to your standards, on your timeline.

Your Own Personal Librarian

Part creation is a time-consuming and error-prone process, often taking away precious hours from the crucial design tasks. Internal resources are often not available or over-stressed trying to keep up with demand. This leads to delays and potential errors impacting manufacturability and time-to-market.

VLS (Virtual Librarian Service) helps engineering teams create their own exclusive part libraries fast and accurately, allowing engineers to focus on innovation.

The screenshot shows the 'Create New Request' form in the VLS interface. It includes fields for 'Manufacturer Name', 'Manufacturer Part Number', 'Customer Name' (with the email 'Amazoreobotic@ema-eda.com'), 'Priority' (set to 'Standard'), and 'Special Instructions'. There is a 'Request Type' section with radio buttons for 'Symbol', 'Footprint', and '3D Model'. Below this is a file upload area with a 'Choose Files' button and a 'Clear All Files' button. At the bottom are 'SUBMIT', 'RESET', and 'Back to top' buttons.

How It Works

VLS provides a unique, custom dashboard for designers. Each user has a unique login to access both a personal and company-wide parts library.

All part requests are created to match your internal standards and requirements derive from your matching datasheets, drawings, or specs. Within two business days, the part will be waiting in your library for use. These parts are exclusive to your company and will not be available to the general public.

Trust The Experts

The Ultra Librarian team creates millions of parts for download from thousands of manufacturers. Our extensive experience with building parts to manufacturer and international standards with consistent high quality results has solidified the team as the go to source for high quality CAD Models. With VLS, bypass long wait-times and receive custom parts in just two business days.

VLS Allows Your Company To:

- Maintain internal company standards and requirements
- Gain access to a custom and exclusive internal parts library
- Reduce time creating parts, increasing overall design productivity
- Establish a custom dashboard for multi-employee use
- Eliminate frustrations from limitations with other part creation tools
- Increase project volume with fast part-request turnaround time
